PROJECT BRIEF · 06 · PERSONAL WEALTH SYSTEM · DHAKA

ARTHA

The operating system for one person's money.

Sanskrit for wealth and substance, named for the Arthashastra — Kautilya's treatise on economics and statecraft, unsentimental and incentive-literate. At the centre is **LUX**, a finance partner who analyses freely and **never executes**. Around her sit the rules, scripts and ledgers that make her enforceable rather than merely persuasive: a written risk limit, verified broker facts, a defined session loop, a veto list, and a ledger.

> THE ONE RULE
>
> Analysis is free and reversible.
> Money is neither.

WHAT SHIPS

2,260 LINES OF LAW · 316 LINES OF PYTHON

ARTHA/	**SOUL** — LUX herself: identity, directives, risk doctrine, money gates	ARTHA/	**VETO** — what she blocks, even when you are certain
ARTHA/	**RISK** — the written limits, in percent, before the click	ARTHA/	**LEDGER** — the score she keeps, unflattering first
ARTHA/	**PLAYBOOK** — the defined session loop	ARTHA/	**SESSION** — how a session opens and closes
ARTHA/	**REVIEW** — the periodic audit of decisions, not returns	ARTHA/	**BROKER** — verified Exness facts, margin and stop-out
tools/	**position_size.py** — 157 lines, stdlib only, places no orders	tools/	**mt5_snapshot.py** — 159 lines, reads the terminal, never writes
logs/	**trade-log.csv** — 24 columns, one row per decision	docs/	**reality-check** — 405 lines that graded the whole thing honestly

Rafi.

WHY THE GATES ARE HARD, AND WHY SOME ARE ONLY ADVISORY

She wants you rich. These are the things that stop it.

SHE BLOCKS THEM EVEN WHEN YOU ARE CERTAIN

HARD RED LINES — NEVER, UNDER ANY FRAMING

- **Fraud or misrepresentation** — deceiving a person or institution for money
- **Insider trading** — acting on material non-public information
- **Market manipulation** — pump-and-dump, wash trading, spoofing, layering
- **Laundering or evasion** — concealing origin of funds, structuring to dodge reporting
- **Credentials** — no API keys, no passwords, no exchange logins. Ever
- **Execution** — she never places, modifies, or closes a trade. She produces the instruction

WHAT SHE DOES WITHOUT ASKING

- Analyses freely — markets, macro, valuation, credit, derivatives, crypto
- Calculates position size and stop distance before you open the terminal
- Drafts the instruction and argues against your stated position
- Reads the broker facts and states the unflattering number first
- Keeps the ledger, and audits decisions rather than returns
- Blocks the veto list even when you say she does not believe in you

TWO DEPLOYMENT PATHS — AND AN HONEST STATEMENT ABOUT EACH

LUX-BUNDLE.MD

PATH A	**Paste-only** — web or TUI modal. You get the improved agent, but the hard gates in §0 remain advisory. Nothing in a prompt can veto a tool call.
PATH B	**Shell access** — the same identity saved as a profile SOUL.md, with the gates enforced in code. They survive --yolo and subagents.
SAID PLAINLY	— "Say so to yourself once, plainly." The bundle does not pretend a prompt is a lock.

THE BROKER FACTS THE SYSTEM IS BUILT ON

VERIFIED AGAINST EXNESS DOCUMENTATION

LEVERAGE	MARGIN RATE	STOP OUT	CONTRACT	THE REAL RISK
1:400	0.25%	0%	1 BTC	Size
Fixed by the instrument, not by your account setting	Rising to 0.5% in news and weekend windows	Margin level. The mechanism by which accounts die	1.00 lot, volume step 0.01, minimum 0.01	Not the model being wrong. Position size

316 LINES OF PYTHON, NONE OF WHICH CAN TOUCH YOUR MONEY

The arithmetic is not the risk.

PURE STDLIB
NO BROKER CONNECTION

POSITION_SIZE.PY — 157 LINES

ASKS PLAIN QUESTIONS, PRINTS THE NUMBERS YOU MUST KNOW

1 **Risk %** of balance, before anything else	2 **Entry & stop** distance in points, in dollars	3 **Volume** lots, snapped to the 0.01 step
4 **Notional** what the position is actually worth	5 **Margin** at 0.25% and the 0.5% news rate	6 **Margin level** how far from the 0% stop out
7 **Verdict** inside the limit, or not	8 **Swap** the cost of holding, priced in	9 **Run BEFORE** not after, not in your head at 11pm

TRADE-LOG.CSV — 24 COLUMNS · 15 SHOWN

THE AUDIT TRAIL THAT SURVIVES A BAD WEEK

1 date_time_local	2 server_time	3 platform
4 account_nickname	5 symbol	6 action
7 volume_lots	8 price_at_decision	9 stop_loss
10 balance_before	11 risk_pct_of_balance	12 model_used
13 human_decision	14 followed_model	15 reason_one_line

THE SESSION LOOP

SESSION.MD · PLAYBOOK.MD · REVIEW.MD

STEP 1
Open
Load the ledger. Read the last decision before the next one

STEP 2
Snapshot
mt5_snapshot.py reads the terminal. Write-only, never the reverse

STEP 3
Size
position_size.py. The number appears before the opinion does

STEP 4
Decide
The human clicks. LUX produces the instruction and nothing more

STEP 5
Review
Audit the decision, not the return. Reasons, not outcomes

THE HONEST VERDICT · REALITY-CHECK-BTC-EXNESS.MD · 405 LINES

"What you are building is a manual trading workflow with a very articulate notebook. That is a legitimate thing to build. **It is not a system.** Nothing in your loop enforces position size, stop loss, or risk limits — the AI cannot, and you have not built anything that will."
