PROJECT BRIEF · 07 · ASTROLOGICAL COMPUTATION ENGINE · DHAKA

CAIRN

902 functions. 122 capabilities probed.
Zero stubs.

A container engine that computes a natal chart across four traditions — **Vedic, Western, Chinese, and calendar systems** — from the Swiss Ephemeris, with sidereal and tropical zodiacs, two house systems, and 20 divisional charts. Every number is computed, none asserted. And every capability the engine claims is **probed by an automated gate** that reports stubs, call errors and failures separately rather than folding them into a pass.

THE COMPUTATION STACK

HERMES_SOUL · 3,050 LINES

- EPH **Swiss Ephemeris** — official Astrodienst .se1 asteroid and fixed-star files, not the Moshier fallback
- AYA **Lahiri ayanamsa** — Chitrapaksha sidereal, with the zodiac stated every time
- HS1 **Whole sign** — Vedic houses
- HS2 **Placidus** — Western houses, both computed in one run
- VAR **20 Vargas** — D1–D16 shodasha plus extended D5, D6, D8, D11
- DAS **4 Dasha systems** — vimshottari, ashtottari, yogini, Jaimini chara
- NODE **Mean / true node** — a variant choice, declared rather than defaulted silently
- TZ **Timezone-aware** — JD 2453561.45833 UTC, no silent DST offset
- AST **Asteroids & fixed stars** — Chiron, Ceres, Pallas, Juno, Vesta, computed from the ephemeris path
- SEN **Sensitivity built in** — ascendant, nakshatra boundary, and noon-chart worst case
- GRD **Birth-time grade** — A record, B family, C estimate, D unknown. C and D trigger analysis
- SR **Solar & lunar return** — crossing found numerically, not approximated by date

122 CAPABILITIES ACROSS 16 FAMILIES · 37 IN THE INCLUDE SET

The hard systems.

EVERY ROW DERIVED
FROM THE SIGNED SPEC

VEDIC — JYOTISHA

VEDIC.PY · 1,112 LINES

- PAN **Panchanga** — nakshatra, tithi, karana, nitya yoga, vara
- DAS **Dasha engines** — vimshottari, ashtottari, yogini, with antardashas and pratyantars
- BAL **Shadbala** — six-fold strength: sthana, dig, kala, cheshta, drik
- DOS **Dosha & edge** — kuja dosha, kalasarpa, gandanta, combust
- VAR **20 Vargas** — navamsa, drekkana, dasamsa, and the shodasha set
- AV **Ashtakavarga** — bhinna and sarva, the point system
- YOGA **Yoga detection** — gajakesari, pancha mahapurusha, raja, kemadruma, nichabhanga
- MUH **Muhurta maths** — rahu kala, yama ghanta, gulika, abhijit, brahma

WESTERN

WESTERN.PY · 315 LINES

- LOT **Hermetic lots** — fortune, spirit, eros, necessity, courage, victory, nemesis
- FIR **Firdaria** — the planetary periods, nocturnals and diurnals
- PRO **Profections & decennials** — annual lords, the predominator
- ELEC **Electional scoring** — horary radicality, ingress timing, Jupiter–Saturn cycles
- PRG **Progressions** — secondary, solar arc, primary directions (Naibod)
- ZR **Zodiacal releasing** — Spirit and Fortune lots, loosing of the bond
- RET **Returns & composites** — solar, lunar, composite, Davison, midpoints
- SAH **Tajaka sahams** — the Arabic parts, computed from longitude

CHINESE & CALENDARS

CHINESE.PY · CALENDARS.PY · JH.PY

- BAZI **BaZi four pillars** — year, month, day, hour, anchored at the jie crossing
- LP **Luck pillars** — the ten-year cycles
- TG **Ten gods** — and strength by season
- CK **Chara karakas** — the eight Jaimini significators, Atmakarana first

SPEC V1.8 · SIGNED REVIEWER #8 · CHANGE CONTROL IN EFFECT

Interpretation may not re-run a calculation.

NO SILENT SUBSTITUTION. EVER.

THE VERIFICATION GATES

- **verify_frozen.py** — hashes the frozen set in the spec's own canonical form, not a convenient one
- **verify_gaps.py** — proves the include list has no gaps, item 1 to 31
- **audit_pointers.py** — every claimed capability resolves to real code
- **verify_shadow_rulebook_06.py** — a named rulebook, checked by name
- **refreeze.py** and three successors — a controlled path to re-freeze, each version logged

THE SILENCE-AS-PASS DEFECT, CAUGHT

- An earlier ad-hoc gate reported **MATCH**
- It was hashing with default separators and **ensure_ascii=True**
- The spec froze a different serialisation — **sort_keys, separate canonical form**
- The gate therefore could not detect the corruption it claimed to detect
- The fix was not a retry. It was **writing the method down once, in code**

THE HONESTY BUDGET · SPEC §0

Birth time is graded **B — family memory**, not a birth record. That grade is an input constraint, not a caveat: it propagates into the refusal points and the tagging, and **every timing claim in the finished report prints [GRADE B] inline.** The spec names it "the artifact's honesty budget."

SENSITIVITY ANALYSIS — WHERE THE ANSWER IS FRAGILE

BECAUSE A GRADE B CHART MUST SAY SO

ASC **Ascendant sensitivity** — ±15 min shifts the lagna ~4°; Lagna stays Gemini

NAK **Nakshatra boundary** — which pada, and how close the edge is

NOON **Noon-chart sensitivity** — the worst case, computed rather than assumed

ERR **Errata on record** — a struck geocode, corrected in the spec itself

THE TRADITIONS MANIFEST — CX-001 V2.0

16 FAMILIES · 122 PROBED · 37 INCLUDED

INC **37 capabilities** — all frozen, all pointered, each derived from the signed spec

CHK **Items 1–31 verified** — programmatically, no gaps in the numbered include list

DUP **Dispositioned once** — included, appendix-only, cut, or inaccessible. No capability twice

ORD **Spec is the authority** — where manifest and spec disagree, the signed spec wins by rule
