SOVEREIGN LIBRARY

A library of law, not a library of tips.

Twenty-eight numbered files, five pillars, and an executable core. Everything a language model is asked to do — reason, adopt a persona, hold context, write code, generate an image, refuse a request — written down as **law with a status line**, then made runnable in **1,451 lines of standard-library Python** with no install dependencies.

```
STATUS: LAW — THE ENTRY POINT
NO FILE IS READ BEFORE THIS ONE.
NO FILE IS WRITTEN WITHOUT THIS ONE.
```

FIVE PILLARS · TWENTY-EIGHT FILES

FILES 00–27 · V3.0 SOVEREIGN EDITION

PILLAR 1

The Codex

FILES 01–10

The complete body of instruction: core, reasoning, persona, output, context, knowledge, coding, creative, image, security.

PILLAR 2

The Command Layer

FILES 11–14

Anatomy, precision, authority, verification. How a command is built, how ambiguity is eliminated, how compliance is proven.

PILLAR 3

The Sovereign Agent

FILES 15–19

Identity, mission, sovereignty, multi-agent, memory. The agent that governs itself instead of being prompted at.

PILLAR 4

The Architect's Mind

FILES 20–23

Systems, selection, evolution, philosophy. The unit of design is the system, not the prompt.

PILLAR 5

The Sovereign Edition

FILES 24–26

Templates and playbook in code, plus the reference matrix. Pillars 1–4 made executable.

WHAT SHIPS WITH IT

TWO WORKING MODULES · ONE REFERENCE · ONE GATE

24 **SOVEREIGN_TEMPLATES.py** — 825 lines, 21 classes, the law made executable

25 **SOVEREIGN_PLAYBOOK.py** — 626 lines, the same law configured per platform

26 **The Sovereign Matrix** — the complete reference, one table for the whole library

27 **Bootstrap** — the completed whole, and the first command to run

Rafi.

FILES 11–14 · HOW A COMMAND IS BUILT AND PROVEN

The sovereign proves compliance.

A COMMAND IS NOT
A REQUEST

THE COMMAND LAYER

FOUR MODULES · EACH A LAW WITH A STATUS LINE

11 **Command Architecture** — the seven sections and the completeness rule

12 **Command Precision** — the twelve-item ambiguity checklist, automated

13 **Command Authority** — the language that carries weight without noise

14 **Command Verification** — the trinity: verdict, seal, proof class

THE CODEX — FILES 01–10

THE COMPLETE BODY OF INSTRUCTION

01 **Codex Core** — the complete body of instruction

02 **Codex Reasoning** — the reasoning architectures

03 **Codex Persona** — the architecture of identity in instruction

04 **Codex Output** — the architecture of certainty

05 **Codex Context** — the sovereign management of context

06 **Codex Knowledge** — research prompting as a sovereign act

07 **Codex Coding** — code as language, prompt as architecture

08 **Codex Creative** — sovereign creative command

09 **Codex Image** — the complete visual prompt language

10 **Codex Security** — the sovereign's knowledge of the attack surface

THE ARCHITECT'S MIND — FILES 20–23

THE UNIT OF DESIGN IS THE SYSTEM

20 **Architect Systems** — the unit of design is the system, not the prompt

21 **Architect Selection** — the framework for choosing between architectures

22 **Architect Evolution** — the architecture of change, and how to version a law

23 **Architect Philosophy** — the questions whose answers are architectures

FILE 15
Identity
The six-section identity block. Who the agent is, in a shape the runtime cannot mistake.

FILE 16
Mission
Five elements. Mission over task — the difference between an instruction and a purpose.

FILE 17
Sovereignty
Perceive, assess, decide, act, verify. Plus the drift check and the declaration protocol.

FILE 18
Multi-agent
Sovereign multi-agent architecture: who may speak, who may decide, who signs.

FILE 19
Memory
Persistent context. The report as memory — five fields, no transcripts, no secrets.

FILES 24–25 · THE LAW MADE RUNNABLE

Twenty-one classes. Every one a law enforced.

A LAW THAT IS NOT CHECKED IS A WISH

SOVEREIGN_TEMPLATES.PY — 825 LINES

THE COMMAND ARCHITECTURE IN CODE

1	`CommandFrame`	file 11 · the seven sections	2	`ExecutorIdentity`	file 15 · six-section block
3	`Mission`	file 16 · the five elements	4	`SovereignAgent`	file 17 · decide / act / verify
5	`Verdict · Seal`	file 14 · the trinity	6	`VerificationRecord`	file 04 · the seal that travels
7	`AmbiguityAudit`	file 12 · twelve items, automated	8	`DriftLogEntry`	file 17 · the drift check
9	`Declaration`	file 17 · declaration protocol	10	`MemorySection`	file 19 · five fields
11	`Escalation`	file 13 · authority ladder	12	`CheckResult`	the pass/fail primitive
13	`ArtifactClass`	file 04 · certainty classes	14	`ProofClass`	file 14 · what may be claimed
15	`AuditFinding`	file 12 · one ambiguity found	16	`Capability`	file 15 · what it may do
17	`SessionState`	file 19 · context across turns	18	`Authority`	file 13 · the permission model
19	`VerificationClass`	file 14 · how proof is graded	20	`SovereignError`	the base failure type
21	`FrameIncomplete`	file 11 · completeness enforced			

HOW THE AGENT RUNS

FILE 17 · THE LOOP IS THE LAW

STEP 1
Perceive
Read the situation before touching it. Name what is actually being asked.

STEP 2
Assess
Weigh against the identity, the mission, and the known constraints.

STEP 3
Decide
Choose, and record the reason. A decision without a reason is a guess.

STEP 4
Act
Produce the artifact within the declared authority.

STEP 5
Verify
Seal the result. An unverified artifact is a draft, whatever it is called.

SOVEREIGN_PLAYBOOK.PY — 626 LINES

THE LIBRARY, CONFIGURED PER PLATFORM

A **Platform profiles** — the same law, expressed for each runtime's contract

B **Verification ladders** — what counts as proof on a platform that cannot run code

C **Escalation paths** — who decides when the law and the runtime disagree

D — four declared pillars of configuration, each traceable to a file above

THE PRINCIPLE — pillar 4, file 20

THE UNIT OF DESIGN IS THE SYSTEM, NOT THE PROMPT.
A PROMPT IS ONE TURN. A SYSTEM IS EVERY TURN AFTER IT.
